Polimex-Mostostal signed a new contract with the net value of over 379 mln PLN

07/16/2012

On 12 July 2012, Polimex-Mostostal signed a contract for the design, supply, and construction of the installation for catalytic denitrification and dedusting of flue gas from boilers on a turnkey basis in the heat and power plant in the PKN ORLEN plant for Polski Koncern Naftowy ORLEN S.A.

The net value of the contract is 379.032.024,66 PLN.

The new installation will reduce nitrogen oxide emission and dust emission in the heat and power plant of the PKN ORLEN plant in Płock. It will serve seven existing boilers. The scope of construction works conducted by Polimex-Mostostal includes the supply, assembly, and commissioning of the catalytic flue gas denitrification installation, electro-filters, air heaters, flue gas and air channels, water heater, flue gas and air ventilators, steel construction and many other installation elements.

Polimex – Mostostal is a leader in the field of catalytic flue gas denitrification installations in Poland. Polimex-Mostostal is currently in the process of completing a catalytic flue gas denitrification installation in the Siekierki heat and power plant. The works in this location will be completed next year.
