# Polimex-Mostostal has launched a road barrier production line in Częstochowa.

11/06/2009

On 6 November 2009 in Częstochowa, in a region of an operational galvanising plant, a modern road barrier production line has been launched.

Due to this investment, Polimex-Mostostal has become one of the largest suppliers of road barriers in the country.

The production line is characterised by high output and a fully automatic production cycle.

- Within 24 hours, we can manufacture 5,600 protective barriers or 10,000 posts and 1,800 profile (stretching) belts. Due to high productive capacities, we are able to provide for the needs of most road investments realised in Poland, says Zbigniew Lenartowicz, Manager of Częstochowa Galvanising Plant.

Beside designing and manufacturing, the plant also offers installation of road barriers and acoustic baffles.

The manufactured road and bridge barriers with guides made of profile steel tape, as well as barrier rails and rigid steel barriers for the construction of bridge structures hold all the permits to be used in road construction in Poland and in the European Union.

The road acoustic baffles manufactured by Polimex-Mostostal in Częstochowa comply with strictest requirements with respect to sound absorption, i.e. the PN-EN-20354:2205 and PN-EN 1793-3 Class A4 standards, and with respect to acoustic insulating power, i.e. the PN-EN ISO 717 and PN-EN 1793-2 Class B3 standards. The parameters have been confirmed by the AGH University of Science and Technology in Krakow.

Acoustic baffle output amounts to 200 thousand m² annually. Polimex-Mostostal offers road barriers and acoustic baffles of highest quality, implements innovative solutions and ensures offer competitiveness.
