Polimex-Mostostal will deliver steel structures fro the construction of the combined cycle power plant

10/22/2015

The Polimex-Mostostal Group will execute a contract for delivery and erection of steel structures for the needs of the combined cycle power plant in PKN Orlen, which is completed by Siemens.

The scope of the contract executed by the Polimex-Mostostal Group covers the deliveries and erection of steel structures for the main process buildings. The approximate 3,500 tons of steel elements delivered by Polimex-Mostostal will be used to build the main structure of the process buildings including their enclosure and auxiliary equipment.

The works will be carried out from October 2015 to January 2017. The condition to participate in the tender for the said scope of works was a positive result of the financial and technical audit performed by Siemens. The value of the contract signed by Polimex Energetyka is approx. PLN 43 million net.

- We are very happy that Siemens appreciated our high competencies in the production of steel structures for the power industry. "We are happy that we successfully underwent the audit of our competencies and execution capacities conducted by such an experienced and demanding partner as Siemens,"- said Jacek Czerwonka, Vice-President of the Management Board, Operations in Polimex-Mostostal.

- When executing projects worldwide, Siemens is cooperating with partners boasting the highest standards. "We are happy that a contract related to the execution of this project was awarded to Polimex-Mostostal," said Grzegorz Należyty, General Director of Power and Gas i Power Generation Services at Siemens Sp. z o.o.
